

## Proposal

We would like to create an application that will provide a soul crushing tic-tac-toe experience. We thought it'd be cool to create a tic-tac-toe application that would incorporate elements from the other classes we've enjoyed. Particularly, we're working on setting up an AI that the user will never be able to beat. Essentially, the user will be able to play against the AI as many times as they'd like to try and outsmart the algorithm. Our application will improve on the ones available in the app store, as not everyone has friends, so our AI will enable them to enjoy an authentic tic-tac-toe experience on their own.

When the user opens the application, they will be taken to a title page that will greet the user and show a basic description:

They will have to click the button to start the game. Once they do, they will see a beautiful tic-tac-toe page that looks like what you see below:

Once the page is up, the user will be able to play tic-tac-toe by tapping on one of the squares in the 3x3 grid to place an X. Once they make their move, the AI will go. This will continue until the user either ties or loses. From there, they will see an option displayed that will ask them if they want to replay the game. They may click on the replay button as many times as they'd like before exiting out and trying again another time.
